

## About Woodies® Safe Dreams

---

### **Expierience, quality, design.**

Woodies Safe Dreams® furniture for newborns and children – 50 years of experience in the furniture industry.

Woodies Safe Dreams® are cots and nursery furniture made by a dedicated team from Poland. The company opened in 1995 but the family behind it has 50 years of priceless experience in the furniture industry. We use every bit of our multigenerational knowledge in producing and designing new furniture for newborns and children – some of the most demanding customers in the world! We believe that parents can have peace of mind when their little ones sleep in a safe bed. We deliver our cots and beds to parents across the whole of Europe.

Our furniture is made of only the highest quality materials from local providers.

We know that by taking care of every detail at every stage of production we'll be able to satisfy and gain the trust of thousands of customers. We've designed our furniture to provide a safe and comfortable sleeping experience for newborns and children. Furthermore, our furniture wouldn't be perfect if we didn't use only the highest quality materials from our Polish suppliers. Woodies' furniture is 100% made in Poland, under strict supervision, and is certified for safety and quality. Additionally, we care about the environment around us and use only ecologically-obtained wood. That's why about a decade ago we planted a forest near our manufactory.

### **The trees we planted have grown into a beautiful forest. Here, a family of badgers have made a home.**

We attach great importance in making our furniture not only safe, but also beautiful!

Multi-award-winning cots and beds from Woodies Safe Dreams® are a combination of safety and world-class design. We believe that a newborn should be surrounded by beautiful things from the very beginning- that's why we've chosen the Scandinavian style of design. Add to that, when we design our products, we are constantly innovating. As a result, the furniture we make is one-of-a-kind and confirmed by the patent office.
